

## Philips Dynalite User Interfaces

The ultimate in user interface solutions – balancing aesthetics and function

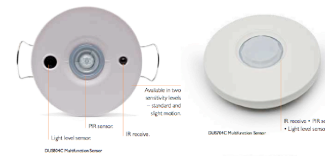

### Sensors

Philips Dynalite multifunction sensors save energy by interacting with smart space systems to manage room-occupancy, light, and detection and IR sensor technology into one unit. This allows advanced automation including turning lights on or off through motion detection and dimming the lighting level once motion is no longer measured.

#### All Multifunction Sensors feature:

- Motion detection light level detection and IR remote in one unit.
- Detects occupancy levels on the lights.
- Automatic Daylight Harvesting mode.
- Unoccupied room lighting can be dimmed or turned off.
- Inbuilt microprocessor in each sensor.
- Larger surface area in a small covers the floor of a building or an entire building.
- All sensors receive their power from the Dynalite network.
- Fully and wirelessly programmable.
- Can be configured to address and control external compatible outputs.

Benefits include improved operational efficiency and less need for many different types of sensors cluttering ceiling space.

#### Temperature Sensors

### DynamicTouch apps

Model	Dimensions (mm)	Weight (kg)
DUB9C-UP	120 x 120 x 120	0.15
DUB9C	120 x 120 x 120	0.15
DUB9C-DH	120 x 120 x 120	0.15
DUB9C-DH	120 x 120 x 120	0.15
DT990C & DT990D	120 x 120 x 120	0.15
